How to Reduce Costs and Improve Profitability

This workshop provides food processing business owners and managers, facility managers and engineers with a framework for integrating energy efficiency into the Food Processing business planning process. You will learn about:

- Energy savings programs available for the food processing sector.
- Financial incentives available for implementing energy reduction projects in your business.
- Energy savings technologies designed especially for the food processing industry.

Participants will hear case studies from local food processors that share how these programs created savings for them. And have the opportunity to meet with utility and state representatives to learn how to take the next step.

Edison in partnership with:

Energy Efficiency for Food Processing
